# Deep Insights Advancing Impactful Medicines

41st Annual J.P. Morgan Healthcare Conference | January 2023

ScholarRock™

# Disclaimers

Various statements in this presentation concerning the future expectations, plans and prospects of Scholar Rock, Inc. (“Scholar Rock”), including without limitation, Scholar Rock’s expectations regarding its strategy, its product candidate selection and development timing, including timing for the initiation of and reporting results from its clinical trials for apitegromab, SRK-181, and other product candidates and indication selection and development timing, its cash runway, the ability of any product candidate to perform in humans in a manner consistent with earlier nonclinical, preclinical or clinical trial data, and the potential of its product candidates and proprietary platform. The use of words such as “may,” “could,” “might,” “will,” “should,” “expect,” “plan,” “anticipate,” “believe,” “estimate,” “project,” “intend,” “future,” “potential,” or “continue,” and other similar expressions are intended to identify such forward-looking statements for the purposes of the safe harbor provisions under The Private Securities Litigation Reform Act of 1995. All such forward-looking statements are based on management's current expectations of future events and are subject to a number of risks and uncertainties that could cause actual results to differ materially and adversely from those set forth in or implied by such forward-looking statements. These risks and uncertainties include, without limitation, that preclinical and clinical data, including the results from the Phase 2 trial of apitegromab or Part A of the Phase 1 trial of SRK-181, are not predictive of, may be inconsistent with, or more favorable than, data generated from future clinical trials of the same product candidate, including the Phase 3 clinical trial of apitegromab in SMA and Part B of the Phase 1 clinical trial of SRK-181, respectively, Scholar Rock’s ability to provide the financial support, resources and expertise necessary to identify and develop product candidates on the expected timeline, the data generated from Scholar Rock’s nonclinical and preclinical studies and clinical trials, information provided or decisions made by regulatory authorities, competition from third parties that are developing products for similar uses, Scholar Rock’s ability to obtain, maintain and protect its intellectual property, the success of Scholar Rock’s current and potential future collaborations, Scholar Rock’s dependence on third parties for development and manufacture of product candidates including, without limitation, to supply any clinical trials, Scholar Rock’s ability to manage expenses and to obtain additional funding when needed to support its business activities and establish and maintain strategic business alliances and new business initiatives, and the impacts of current macroeconomic and geopolitical events, including changing conditions from the COVID-19 pandemic, hostilities in Ukraine, increasing rates of inflation and rising interest rates, on business operations and expectations, as well as those risks more fully discussed in the section entitled "Risk Factors" in Scholar Rock’s Quarterly Report on Form 10-Q for the quarter ended September 30, 2022, as well as discussions of potential risks, uncertainties, and other important factors in Scholar Rock’s subsequent filings with the Securities and Exchange Commission. Any forward-looking statements represent Scholar Rock’s views only as of today and should not be relied upon as representing its views as of any subsequent date. All information in this press release is as of the date of the release, and Scholar Rock undertakes no duty to update this information unless required by law.

Apitegromab and SRK-181 are investigational drug candidates under evaluation. Apitegromab and SRK-181 have not been approved for any use by the FDA or any other regulatory agency and the safety and efficacy of apitegromab and SRK-181 have not been established.

ScholarRock™

# Scholar Rock:

## Transforming Patient Lives, Targeting High Unmet Medical Need

### Revolutionary Platform

- Global leader in TGFβ superfamily biology
- Targeting the latent forms of growth factors
- Exquisite selectivity to deliver differentiated therapeutic profiles

### Neuromuscular and Beyond

- Rich preclinical pipeline focused on high unmet patient needs
- Phase 3 SAPPHIRE study underway, data readout expected in 2024
- Phase 1 POC DRAGON study underway in immuno-oncology

### Positioned for Success

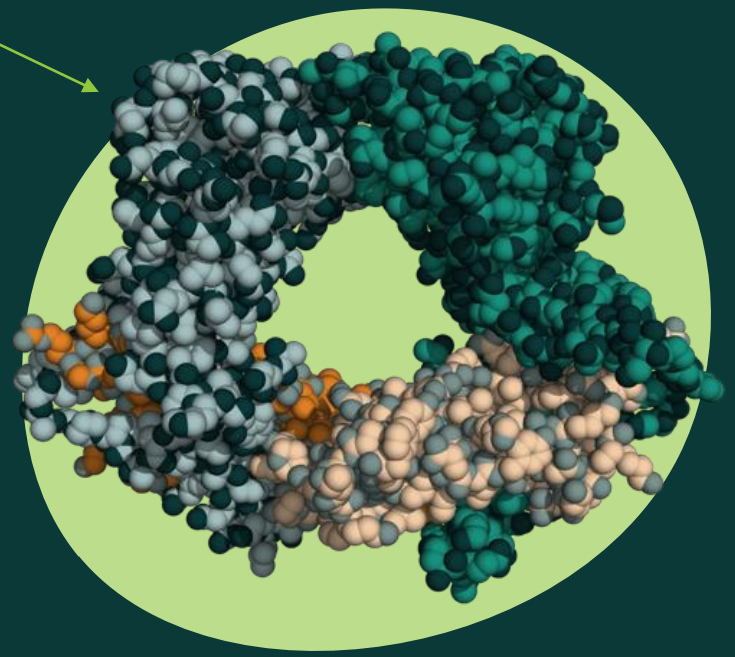
- Compelling proof-of-concept TOPAZ data informed Phase 3 SAPPHIRE study design
- Seasoned leadership team with track record of clinical and commercial success
- Anticipated cash runway into 2025

### Strategic Optionality

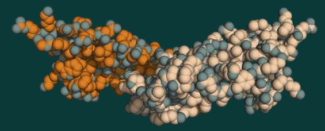
- Commercial planning underway for apitegromab (SMA) in US and Europe
- Broad platform, including promising early-stage assets, provides opportunities to advance alone or in partnership

# Revolutionary Approach to Regulating TGFβ Superfamily Implicated in Devastating Diseases

**Scholar Rock's Target**
Latent Growth Factor



Traditional Target
"mature" growth factor



## TGFβ Superfamily: Highly Sought-After Targets

Recognized by the industry as important targets given their fundamental roles in regulating a variety of cellular processes

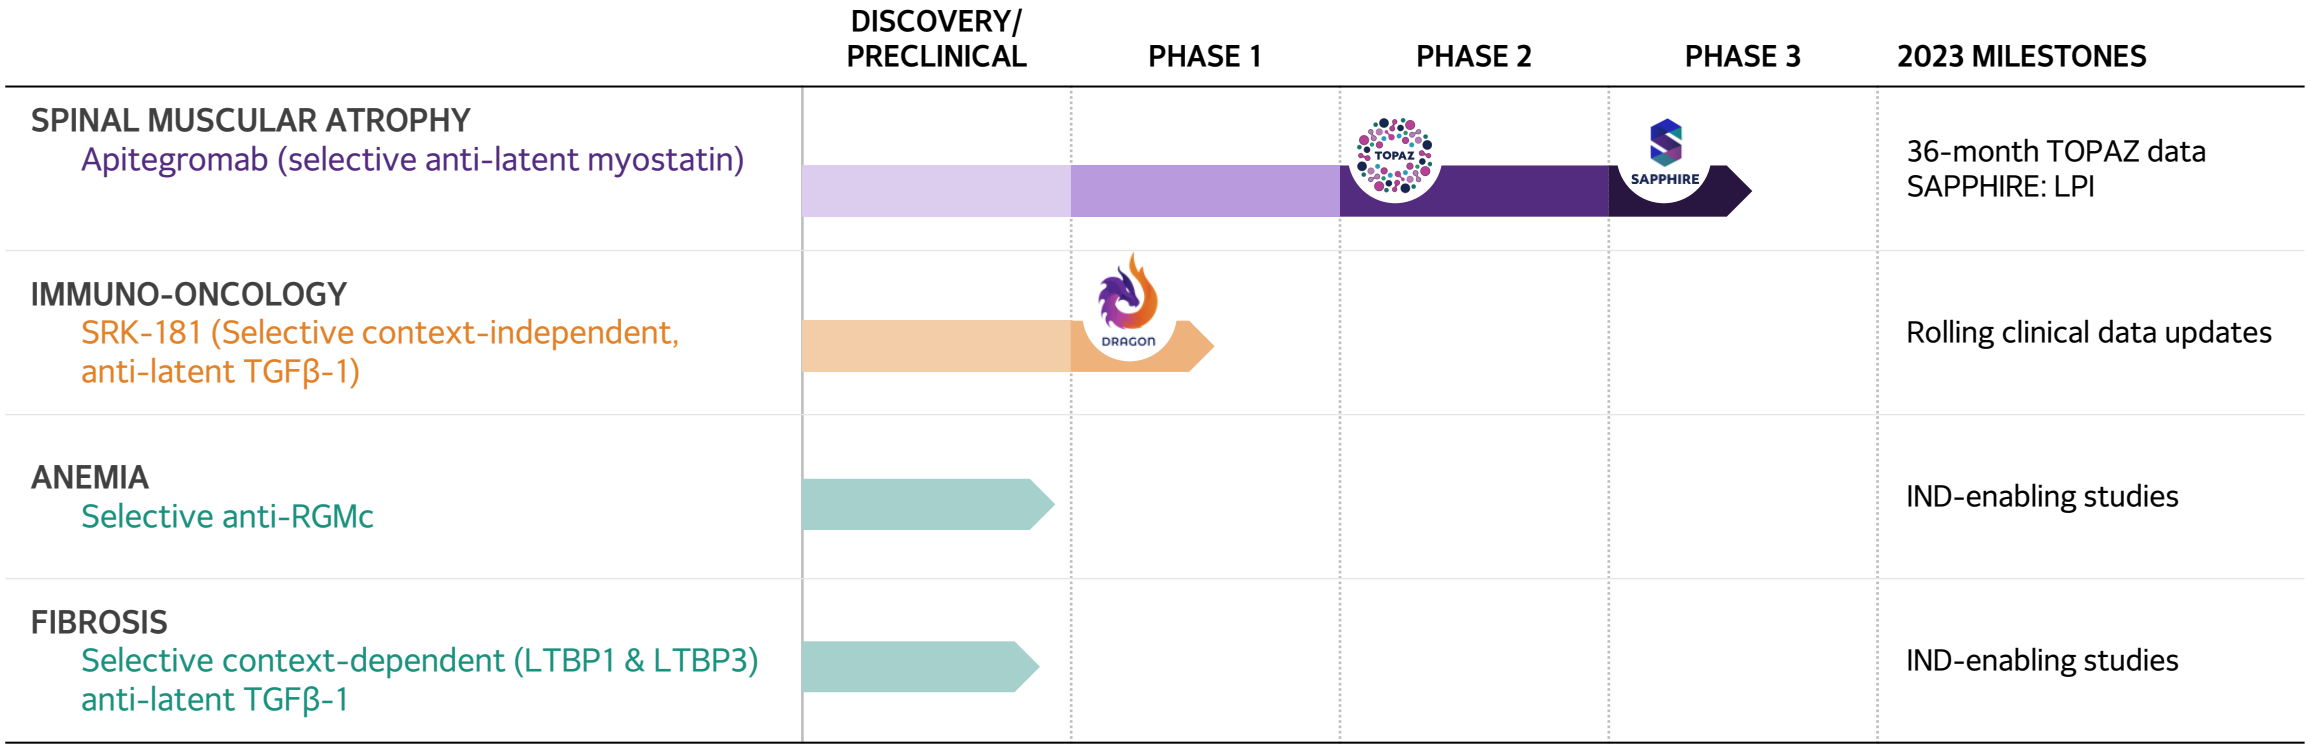
Dysregulation plays a role in devastating diseases that have a high unmet need, including:

- Neuromuscular disorders
- Fibrosis
- Oncology

## Scholar Rock's R&D Platform
Transforming Medical Practice

- Selectively target the latent form of growth factors in the microenvironment of cells and tissues with uniquely designed antibodies
- Overcome the challenges that plague traditional approaches that target the "mature" growth factor, which are difficult to differentiate and lead to unintended negative effects

# Robust Pipeline of Novel Product Candidates



**Potential to transform the lives of patients suffering from a wide range of serious diseases, including neuromuscular disorders, oncology, and fibrosis**

# Leadership Team: Experienced in Drug Development and Commercialization

**Jay Backstrom, MD, MPH**
President & CEO

30 years of clinical R&D experience, leading multiple successful regulatory approvals

ACCELERON PHARMA · Celgene

**Ted Myles, MBA**
Chief Operating Officer & CFO

25 years of progressive experience in clinical and commercial-stage companies

amag PHARMACEUTICALS · OCATA THERAPEUTICS™

**Junlin Ho, JD**
General Counsel & Corporate Secretary

15 years of experience leading and advising life sciences companies in areas of legal and compliance

FOUNDATION MEDICINE · Ziopharm ONCOLOGY

**Caryn Parlavecchio**
Chief Human Resources Officer

25 years of experience leading HR, culture transformation, leadership development, DEI, and talent management

HolyName · NOVARTIS

**Jing Marantz, MD, PhD, MBA**
Chief Medical Officer

20 years of industry expertise across clinical pharmacology, neurology, hematology/oncology, and rare diseases

ACCELERON PHARMA · Alnylam PHARMACEUTICALS

**Mo Qatanani, PhD**
SVP, Research

15 years of industry experience on the strategic and operational sides of research & development

Dyne THERAPEUTICS · ALEXION

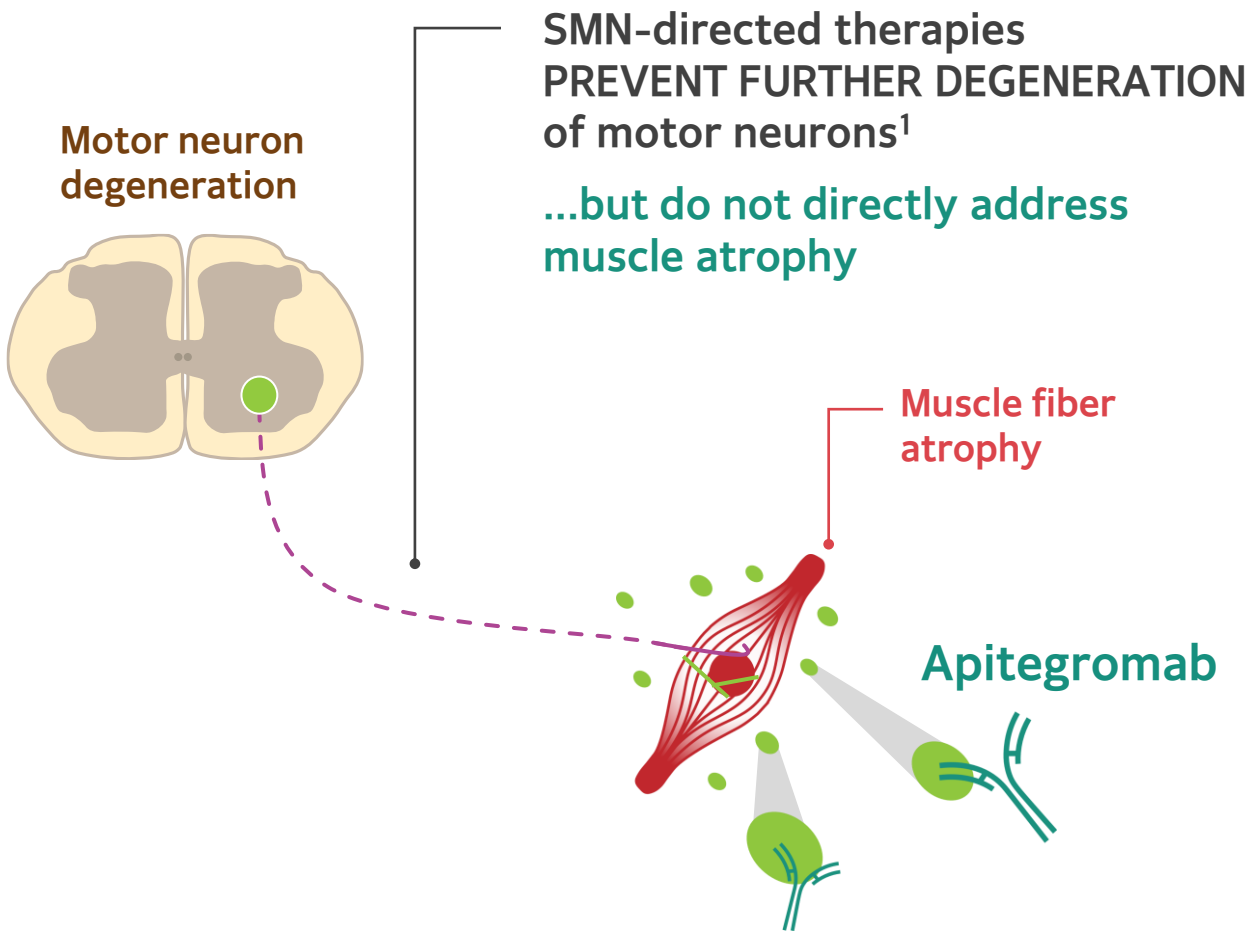
SAPPHIRE

# Apitegromab: The Next Potential Transformative Therapy for Patients with Spinal Muscular Atrophy (SMA)

ScholarRock™

# Apitegromab: Potential Muscle-Directed Therapy for SMA



## Apitegromab is a MUSCLE-DIRECTED APPROACH aimed at improving motor function*[2,3]

Myostatin is a negative regulator of skeletal muscle growth

Apitegromab is a fully human, mAb that specifically binds to proforms of myostatin and inhibits myostatin activation, leading to increased muscle mass and muscle function

**Strong evidence indicates upstream targeting of structurally differentiated latent myostatin avoids undesirable off-target effects**

* Based on Animal Model Data; 1. Adapted from: SMA Foundation Overview. http://www.smafoundation.org/wp-content/uploads/2012/03/SMA-Overview.pdf.; Accessed April 18, 2021; 2. Long KK, et al. Hum Mol Genet. 2019;28(7):1077-1088; 3. Pirruccello-Straub M, et al. Sci Reports. 2018;8(1):2292. doi:10.1038/s41598-018-20524-9

# Spinal Muscular Atrophy

Motor neuron impairment and loss due to SMN genetic deficiency, leading to muscle atrophy and weakness

GLOBAL DISEASE:

**30,000-35,000 affected**

**in US and Europe alone**[1, 2, 3,4]

*TOPAZ Phase 2 trial evaluated patients with Type 2 and 3 SMA (did not include Type 1)

Apitegromab is an investigational drug candidate being evaluated for the treatment of spinal muscular atrophy. Apitegromab has not been approved for any use by the US FDA or any other health authority, and its safety and efficacy have not been established.

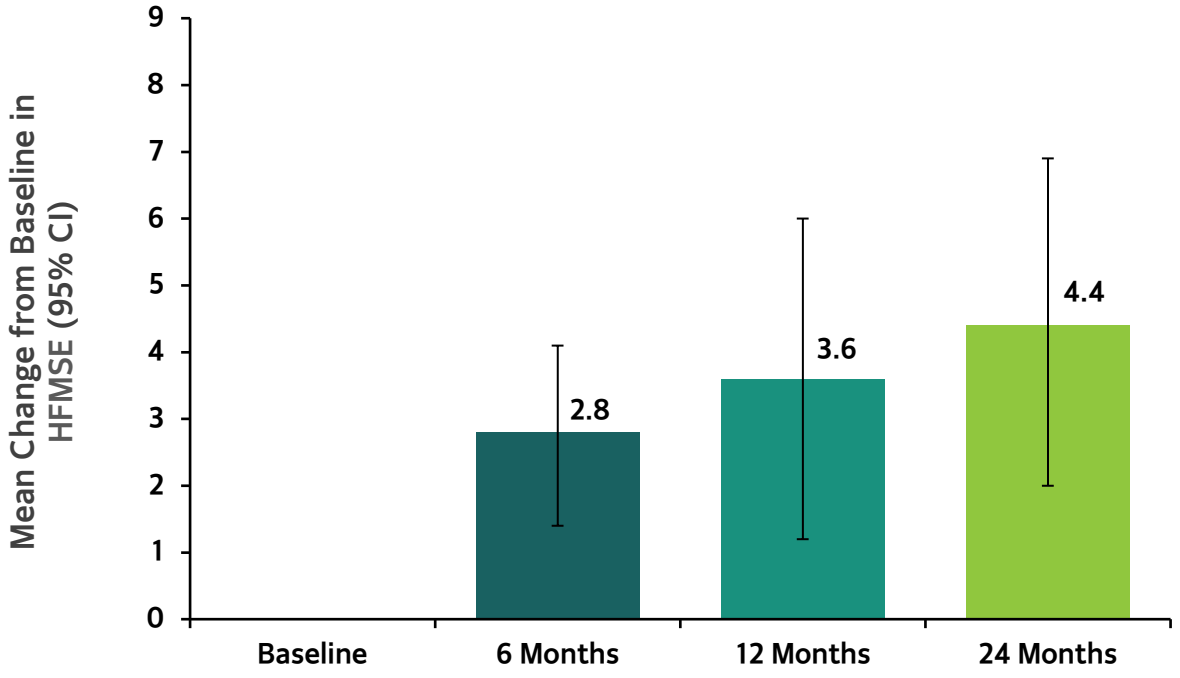
# Sizable, Sustained Increases in HFMSE Observed Over 24 Months of Apitegromab

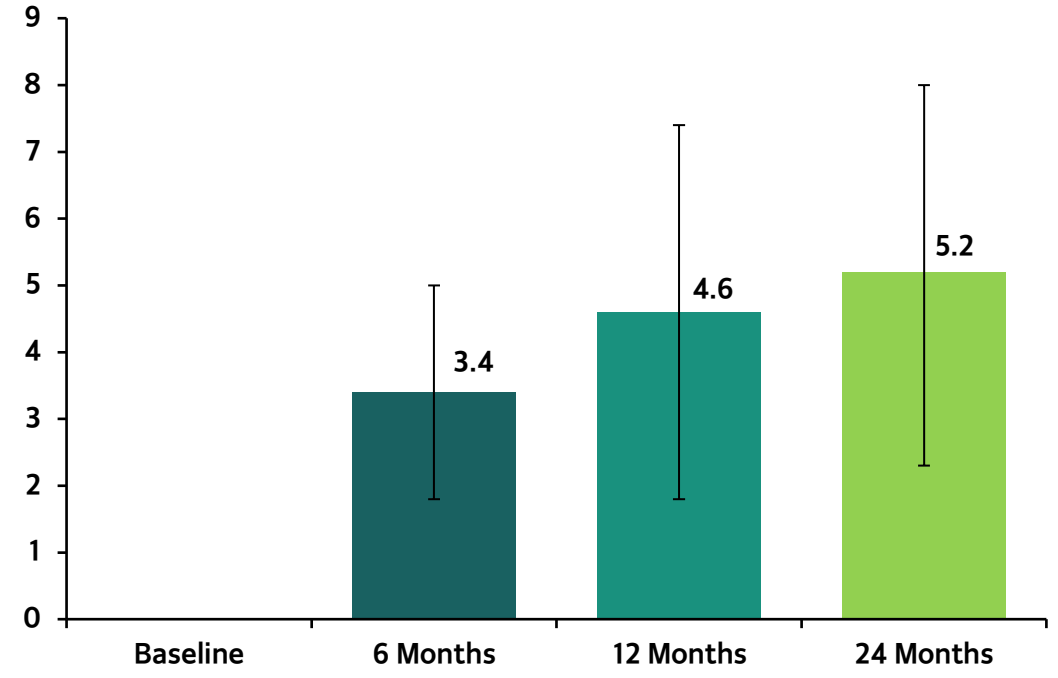
## Pooled Non-Ambulatory Patients Excluding Data Post Scoliosis Surgery (all dose groups)

### Age 2-21 Years



| | Baseline | 6 Months | 12 Months | 24 Months |
|---|---|---|---|---|
| n= | 35 | 29 | 32 | 28 |

### Age 2-12 Years



| | Baseline | 6 Months | 12 Months | 24 Months |
|---|---|---|---|---|
| n= | 29 | 23 | 26 | 23 |

For the 24-month evaluation, an observed case analysis was conducted, which pooled all the non-ambulatory patients (Cohorts 2 and 3) and was based upon the available data for given timepoints. This analysis population included patients receiving either low dose (2 mg/kg) or high dose (20 mg/kg) apitegromab (inclusive of patients in Cohort 3 who switched from 2 mg/kg to 20 mg/kg in Year 2). This analysis excludes from the observed case analysis any HFMSE data following scoliosis surgery in TOPAZ. Of the three non-ambulatory patients who had scoliosis surgery, data from one was excluded and the other two did not have valid HFMSE assessments. Error bars represent SEM. Values in parentheticals represent 95% confidence interval. Crawford T et al. TOPAZ EXTENSION: 24-MONTH EFFICACY AND SAFETY OF APITEGROMAB IN PATIENTS WITH LATER-ONSET SPINAL MUSCULAR ATROPHY (TYPE 2 AND TYPE 3 SMA) Podium Presentation Presented at CureSMA; June 2022. Data on File. Scholar Rock, Inc. Cambridge, MA. Apitegromab is an investigational drug candidate being evaluated for the treatment of spinal muscular atrophy. Apitegromab has not been approved for any use by the US FDA or any other health authority, and its safety and efficacy have not been established.

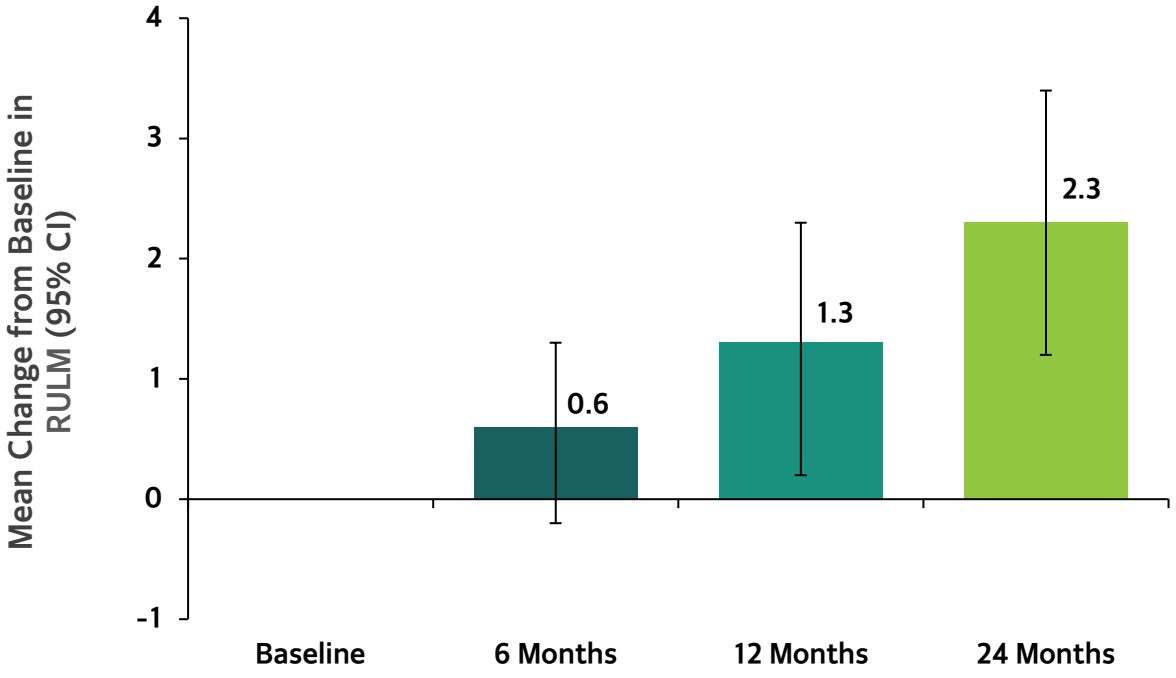
# Continued Increase in RULM Observed at 24 Months of Apitegromab

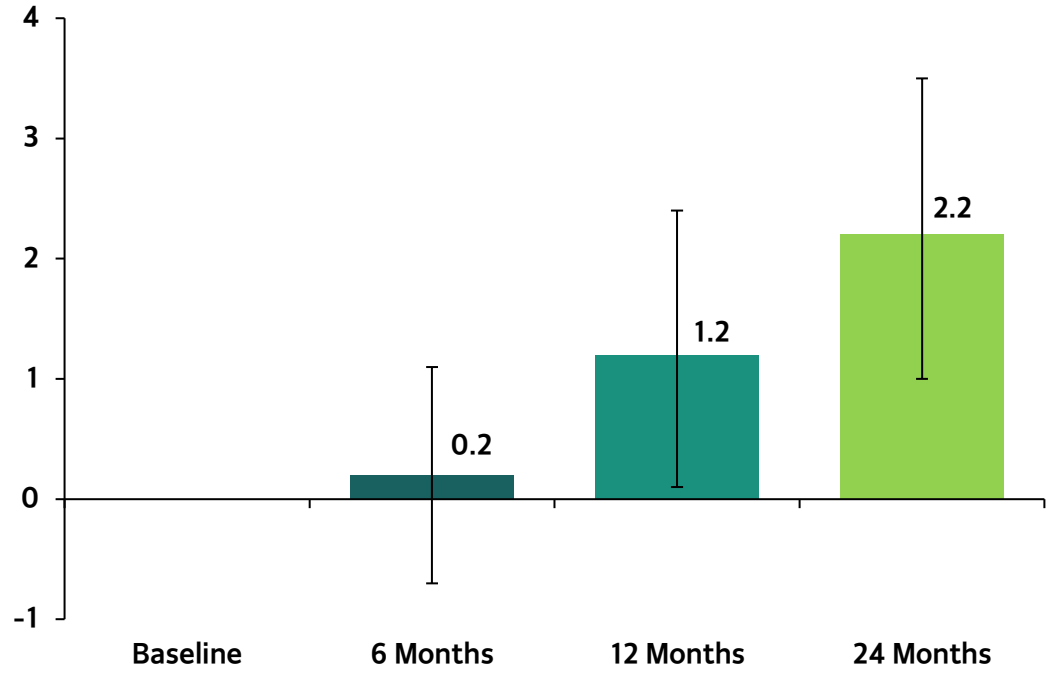
## Pooled Non-Ambulatory Patients Excluding Data Post Scoliosis Surgery (all dose groups)

### Age 2-21 Years



| | Baseline | 6 Months | 12 Months | 24 Months |
|---|---|---|---|---|
| n= | 34 | 28 | 31 | 30 |

### Age 2-12 Years



| | Baseline | 6 Months | 12 Months | 24 Months |
|---|---|---|---|---|
| n= | 28 | 22 | 25 | 25 |

For the 24-month evaluation, an observed case analysis was conducted, which pooled all the non-ambulatory patients (Cohorts 2 and 3) and was based upon the available data for given timepoints. This analysis population included patients receiving either low dose (2 mg/kg) or high dose (20 mg/kg) apitegromab (inclusive of patients in Cohort 3 who switched from 2 mg/kg to 20 mg/kg in Year 2). This analysis excludes data from 3 non-ambulatory patients after their scoliosis surgery during TOPAZ from the Observed Case Analysis. Error bars represent SEM. Values in parentheticals represent 95% confidence interval. Crawford T et al. TOPAZ EXTENSION: 24-MONTH EFFICACY AND SAFETY OF APITEGROMAB IN PATIENTS WITH LATER-ONSET SPINAL MUSCULAR ATROPHY (TYPE 2 AND TYPE 3 SMA) Podium Presentation Presented at CureSMA; June 2022. Data on File. Scholar Rock, Inc. Cambridge, MA. Apitegromab is an investigational drug candidate being evaluated for the treatment of spinal muscular atrophy. Apitegromab has not been approved for any use by the US FDA or any other health authority, and its safety and efficacy have not been established.

ScholarRock

# No Serious Safety Risks Identified Over 24 Months of Apitegromab Treatment

| Treatment-Emergent Adverse Events (TEAEs)* | 2 mg/kg dose (N=10) n (%) | 20 mg/kg dose (N=48) n (%) | Total (N=58) n (%) |
|---|---|---|---|
| Any TEAE | 10 (100) | 45 (93.8) | 55 (94.8) |
| Any Serious TEAE | 3 (30) | 11 (22.9) | 14 (24.1) |
| Any TEAE leading to study drug discontinuation | 0 (0.0) | 1 (2.1) | 1 (1.7) |
| Any Grade 3 (severe) or higher TEAE | 2 (20) | 9 (18.8) | 11 (19) |

Incidence and types of TEAEs were consistent with the underlying disease or nusinersen therapy

Five most frequently reported TEAEs were headache, pyrexia, upper respiratory tract infection, cough, and nasopharyngitis

No deaths or Suspected Unexpected Serious Adverse Reactions (SUSARs) reported

Adverse events reported as mostly mild to moderate in severity

No identified serious risks as of 4/7/2022

**approximately 90% remain on apitegromab** as of 12/31/2022**

Crawford T et al. TOPAZ EXTENSION: 24-MONTH EFFICACY AND SAFETY OF APITEGROMAB IN PATIENTS WITH LATER-ONSET SPINAL MUSCULAR ATROPHY (TYPE 2 AND TYPE 3 SMA) Podium Presentation Presented at CureSMA; June 2022

*Notes: % = 100 x n/N (n=incidence)

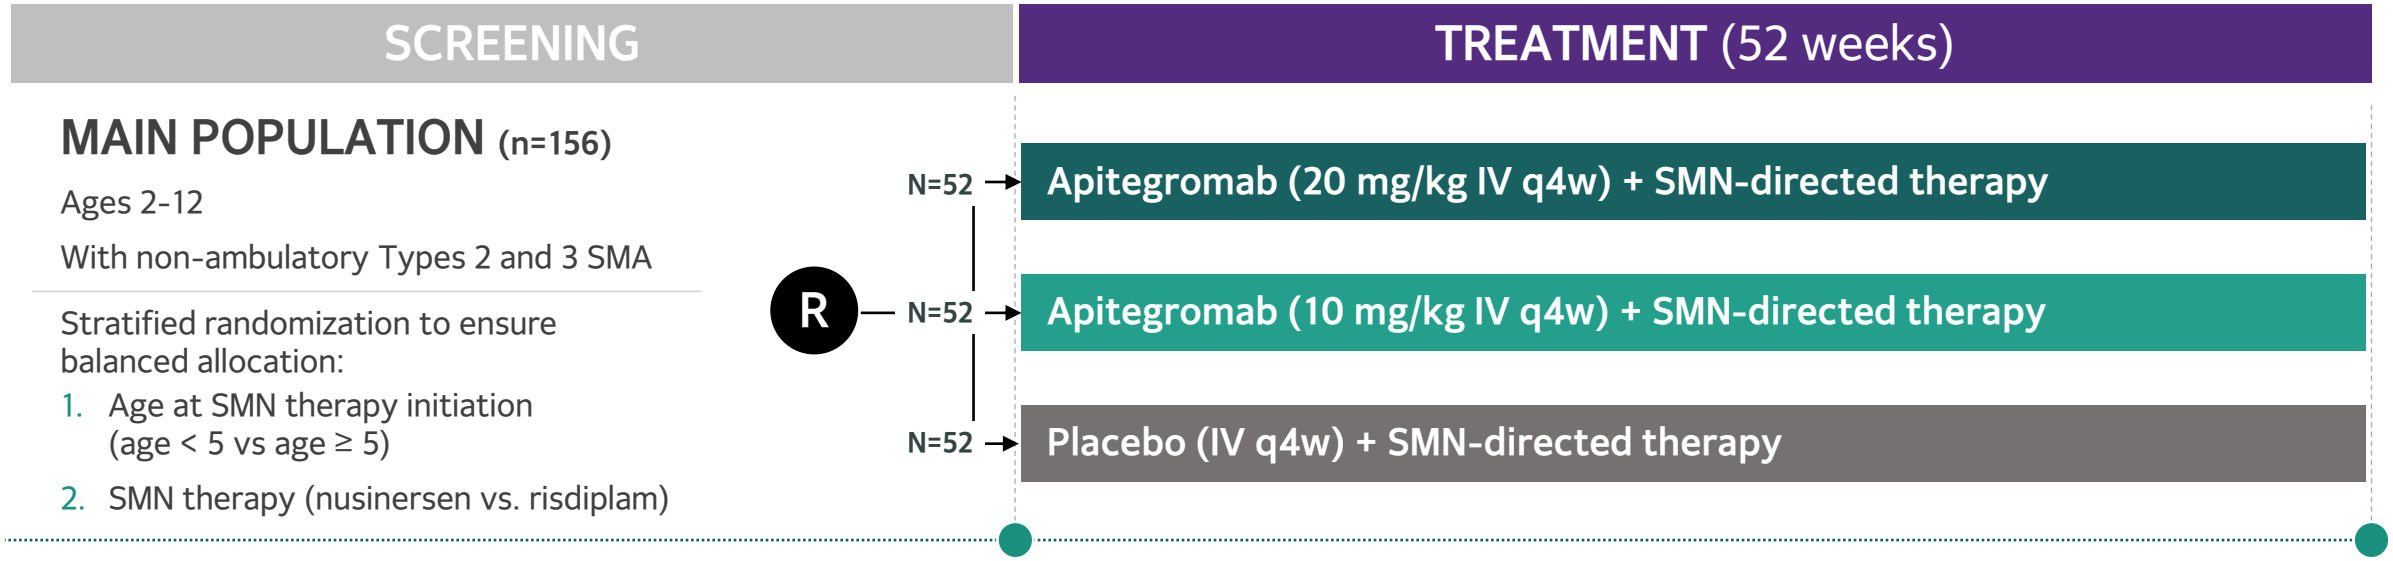
**51/57 patients

Treatment-emergent adverse events (TEAEs) are defined as adverse events (AEs) that start after the first dose of study drug or start prior to the administration of study drug and worsen in severity/grade or relationship to investigational medication after the administration of study drug. Data is for safety events collected over the 24-month period and includes patients who switched from 2 mg/kg to 20 mg/kg. Data on file, extracted on April 7, 2022. Scholar Rock, Inc. Cambridge, MA. Apitegromab is an investigational drug candidate being evaluated for the treatment of spinal muscular atrophy. Apitegromab has not been approved for any use by the US FDA or any other health authority, and its safety and efficacy have not been established.

# Ongoing SAPPHIRE Phase 3 Trial Overview

SAPPHIRE

Randomized, double-blind, placebo-controlled, parallel arm design (n=204)
Enrolling patients on SMN-directed therapy (nusinersen or risdiplam)
Anticipate completing enrollment in 2023



## ENDPOINTS

**Primary Efficacy:**
Mean HFMSE change from baseline at 12 months

**Additional Efficacy Measures:**
RULM, WHO, other outcome measures

**Safety, PK/PD, ADA**

## Additional Data Opportunities

**Exploratory population (age 13-21), in patients using SMN therapy**
Focused upon safety & exploratory efficacy (n=48; 2:1 randomization between apitegromab 20 mg/kg vs placebo)

**Separate open-label extension study (after patients complete 12-month treatment period)**
Focused upon safety & exploratory long-term efficacy

ClinicalTrials.gov Identifier: NCT05156320
R=Randomization

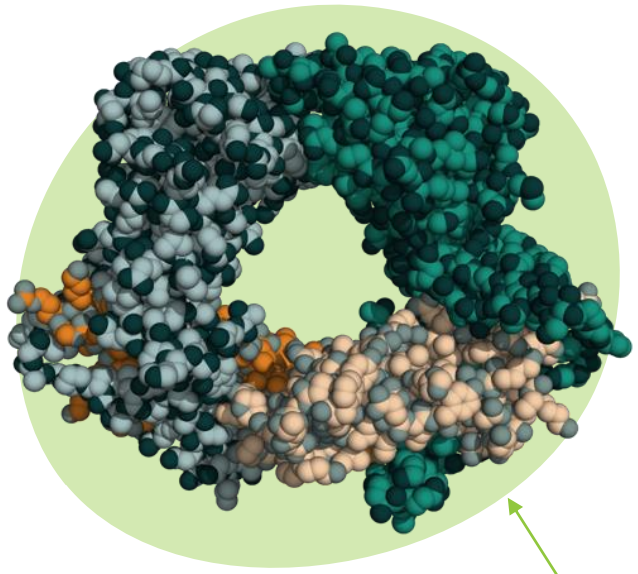
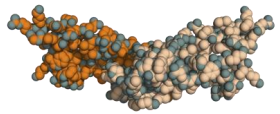
# SRK-181: Unique Latent TGFβ-1 Selective Approach to Overcoming Checkpoint Inhibitor Resistance





Traditional Target
"Mature" growth factor

## SRK-181: Latent TGFβ-1 Inhibitor

| | | | |
|---|---|---|---|
| **Targets TGFβ-1** | **Potential to overcome CPI resistance** | SRK-181 inhibits the TGFβ-1 implicated in check point inhibitor resistance | |
| **Selective to β-1 isoform** | **Highly selective to β-1 isoform vs. 2 and 3** | Increases therapeutic window and potentially avoids toxicities associated with non-selective TGFβ inhibition | Other programs target multiple isoforms of TGFβ |
| **Targets the latent form of TGFβ-1** | **Increases opportunity to inhibit TGFβ-1** | Selectively targeting the latent form shuts off the growth factor before activation | Most other programs target the mature form of TGFβ-1 |
| **Context-independent** | **Inhibits all sources of TGFβ-1** | SRK-181 targets all TGFβ-1 sources (LRRC33, GARP and LTBP1 and 3) | Some programs only target one source |

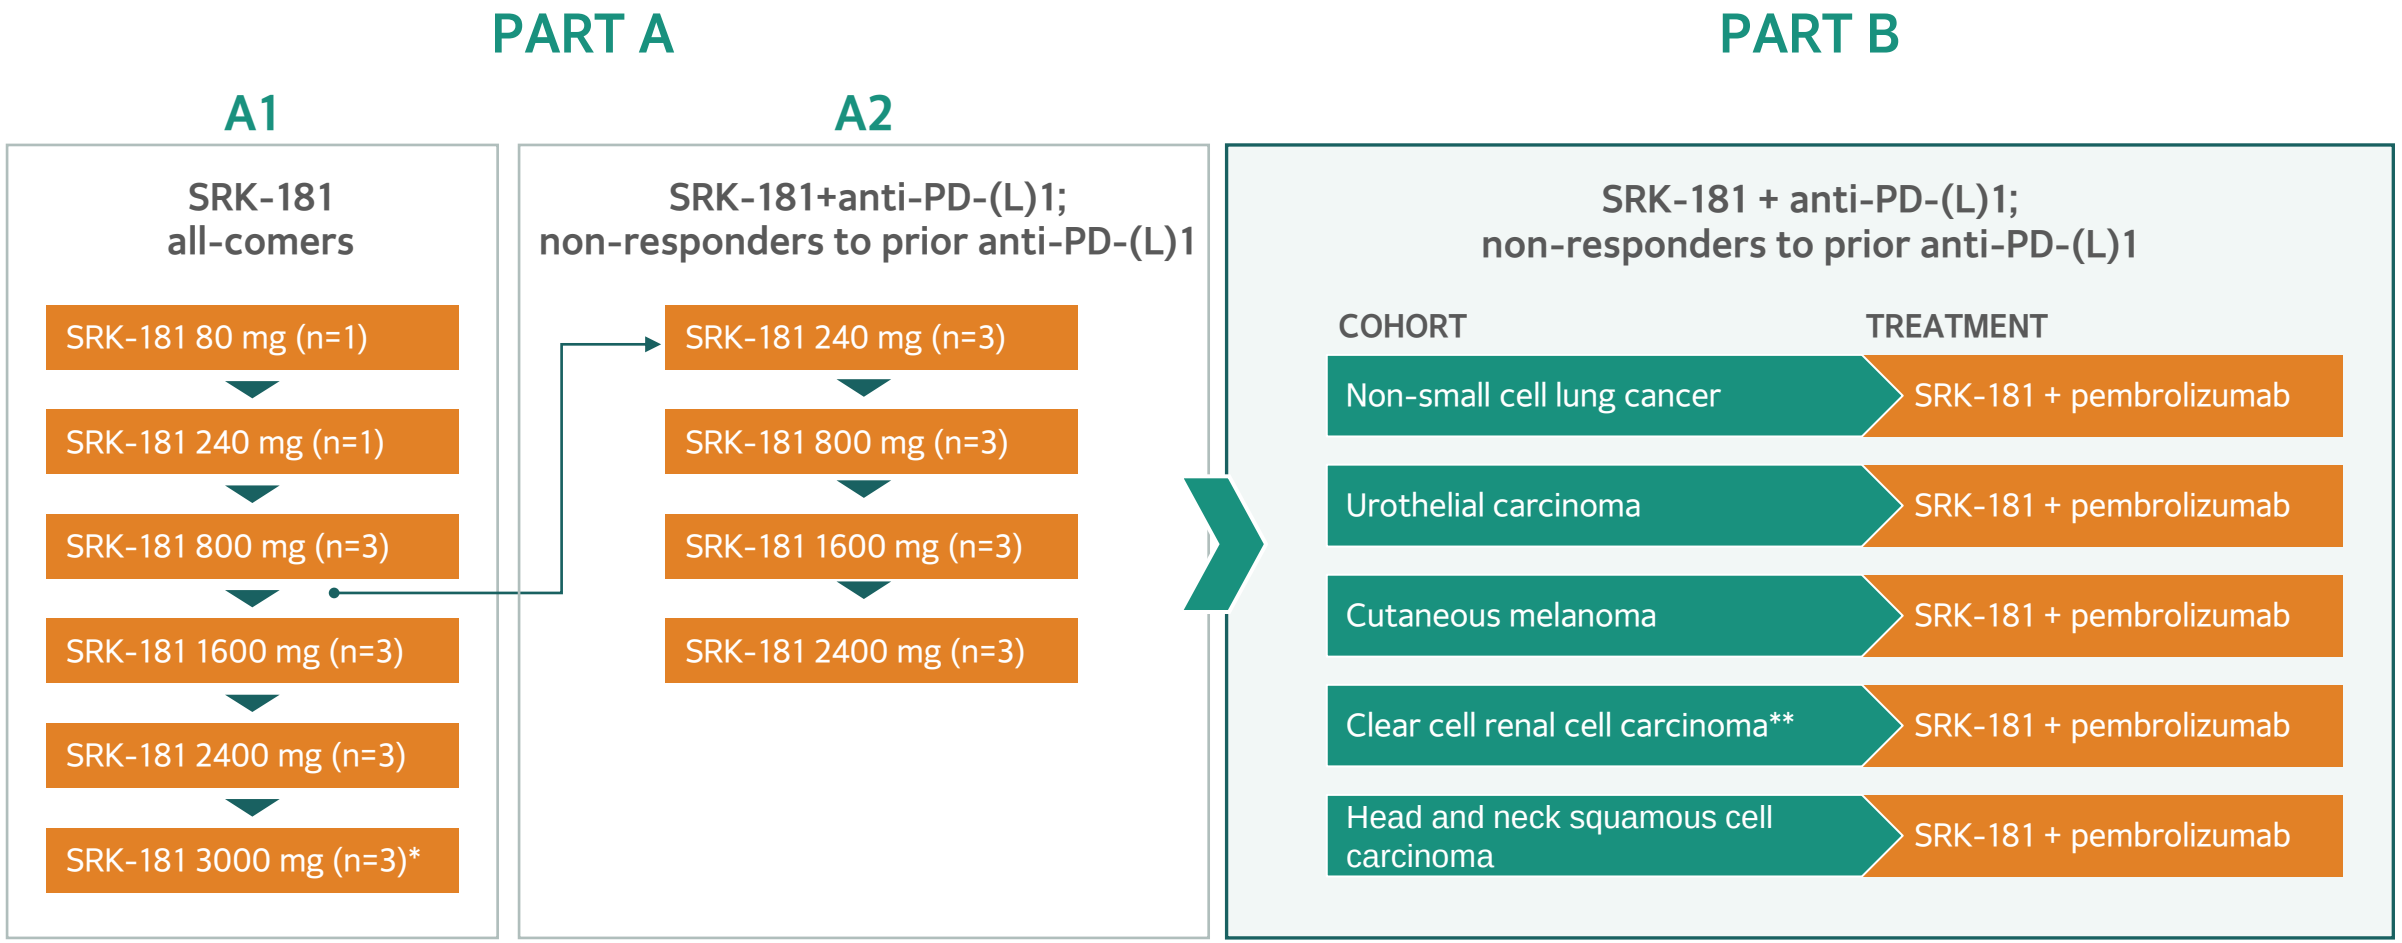
**Overcome Exclusion**

SRK-181-mIgG1 combination therapy led to influx and amplification of cytotoxic CD8+ cells in preclinical bladder tumor model

Preclinical data published in *Science Translational Medicine*. Martin CJ, et al. *Sci Transl Med*. 2020 Mar 25;12(536):eaay8456. https://scholarrock.com/platform/publications.
Data from MBT-2 syngeneic tumor model. Dose 10mg/kg QW for 4 weeks.

# DRAGON Phase 1 POC Trial to Evaluate SRK-181's Ability to Overcome Primary Resistance to Checkpoint Inhibitors



* A cohort of 2000 mg Q2W (n=3) was also evaluated.
**The clear cell RCC and HNSCC cohorts will also explore the effects of SRK-181 in patients with relapsed response after anti-PD-(L)1 treatment.
1. NCT04291079 on www.clinicaltrials.gov.

# DRAGON Part A: Safety

## PART A1

### Treatment-Emergent AEs Related to SRK-181, All Grades >10%

| Dose (MG) | 80 N=1 | 240 N=1 | 800 N=3 | 1600 N=4 | 2400 N=3 | 3000 N=3 | 2000 N=4 | All N=19 |
|---|---|---|---|---|---|---|---|---|
| Fatigue | 0 | 1 | 0 | 0 | 1 | 0 | 1 | 3 (15.8%) |
| Decreased Appetite | 1 | 0 | 1 | 0 | 0 | 0 | 0 | 2 (10.5%) |
| Nausea | 1 | 0 | 0 | 0 | 0 | 0 | 1 | 2 (10.5%) |

**No DLTs** were observed up to 3000 mg q3w and 2000 mg q2w

**No Grade 4 or 5** treatment-related AEs occurred

**Treatment-related Grade 3 AEs:**

- Alanine aminotransferase increased (1 patient)
- Treatment-related SAE were elevated troponin I (1 patient, at 2000 mg q2w)

## PART A2

### Treatment-Emergent AEs Related to SRK-181 or Anti-PD(L)1, All Grades >10%

| Dose (MG) | 240 N=3 | 800 N=3 | 1600 N=6 | 2400 N=3 | All N=19 |
|---|---|---|---|---|---|
| Pruritis | 1 | 0 | 1 | 1 | 3 (20.0%) |
| Rash | 0 | 1 | 0 | 2 | 3 (20.0%) |
| Rash maculo-papular | 1 | 0 | 1 | 1 | 3 (20.0%) |
| Diarrhea | 0 | 0 | 2 | 0 | 2 (13.3%) |

**No DLTs** were observed up to 2400 mg q3w

**No Grade 4 or 5** treatment-related AEs occurred

**Treatment-related Grade 3 AEs:**

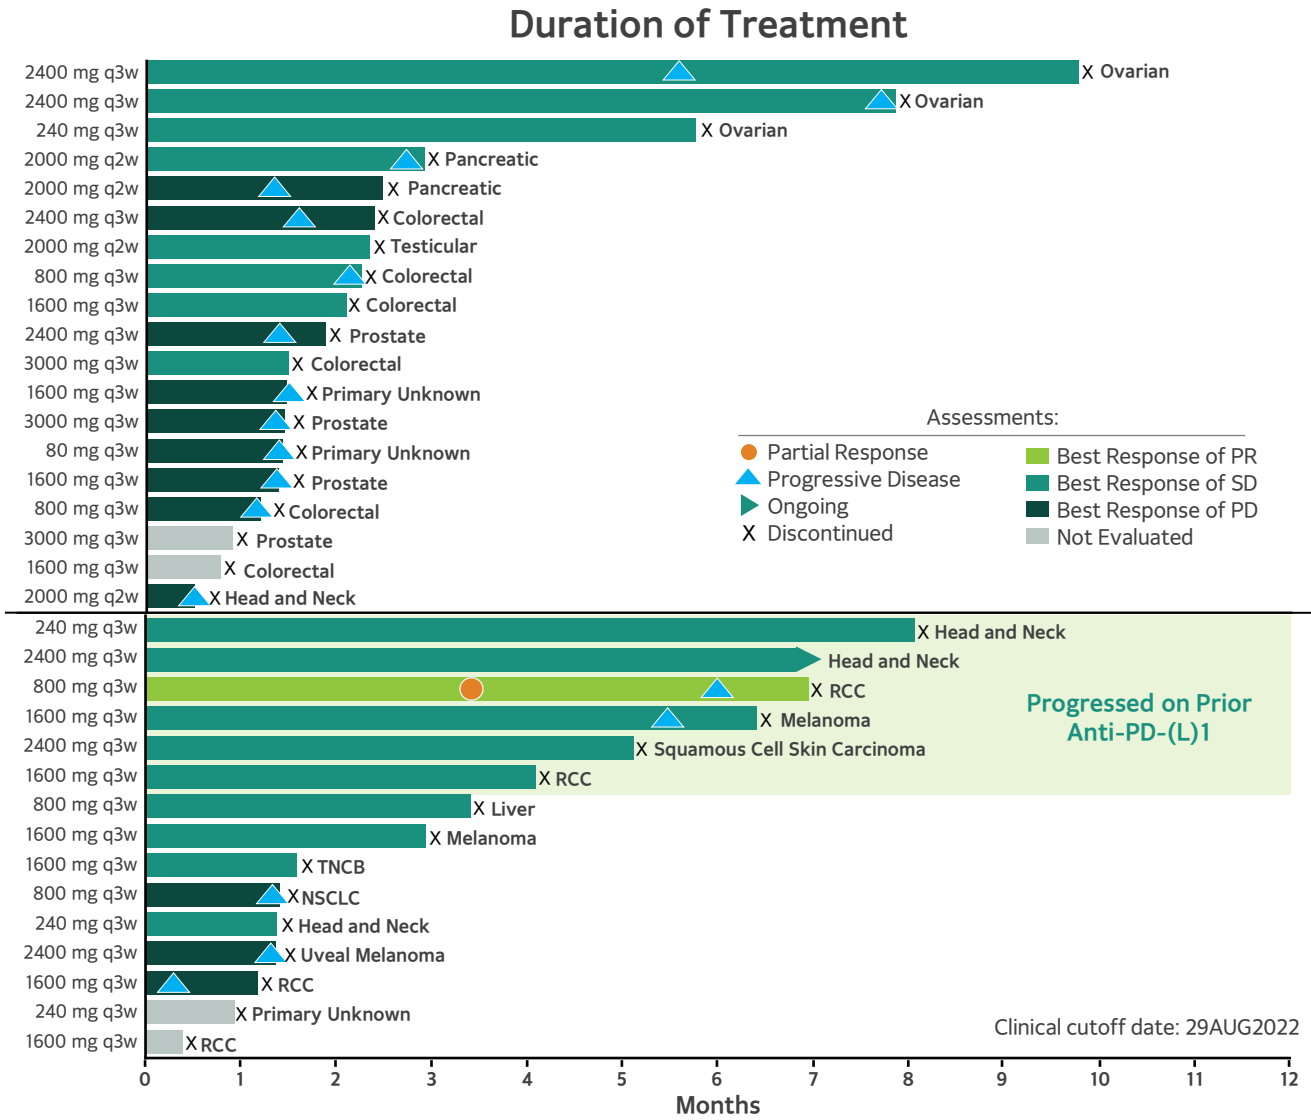
- Puritus (2 patients), blister, immune-mediated lung disease, rash and rash maculo-popular (1 patient each)

**Treatment-related SAEs:**

- Blister, pruritus, and rash (all in 1 patient) and immune-mediated lung disease (1 patient)

Yap T et al. SRK-181, a latent TGFβ1 inhibitor: safety, efficacy, and biomarker results from the dose escalation portion of a phase I trial (DRAGON trial) in patients with advanced solid tumors (Poster 780); Presented at SITC; Nov. 10-11, 2022. Clinical cutoff date: August 29, 2022. All dose levels were administered q3w except 2000 mg, which was administered q2w.
SRK-181 is an investigational drug candidate that is being evaluated for the treatment of cancer. SRK-181 has not been approved by the US FDA or any other health authority, and its safety and efficacy have not been established.

# DRAGON Part A: Preliminary Efficacy Data* Presented at SITC November 2022



## **Part A1** (n=19)

- 8 patients had a best response of stable disease (SD)

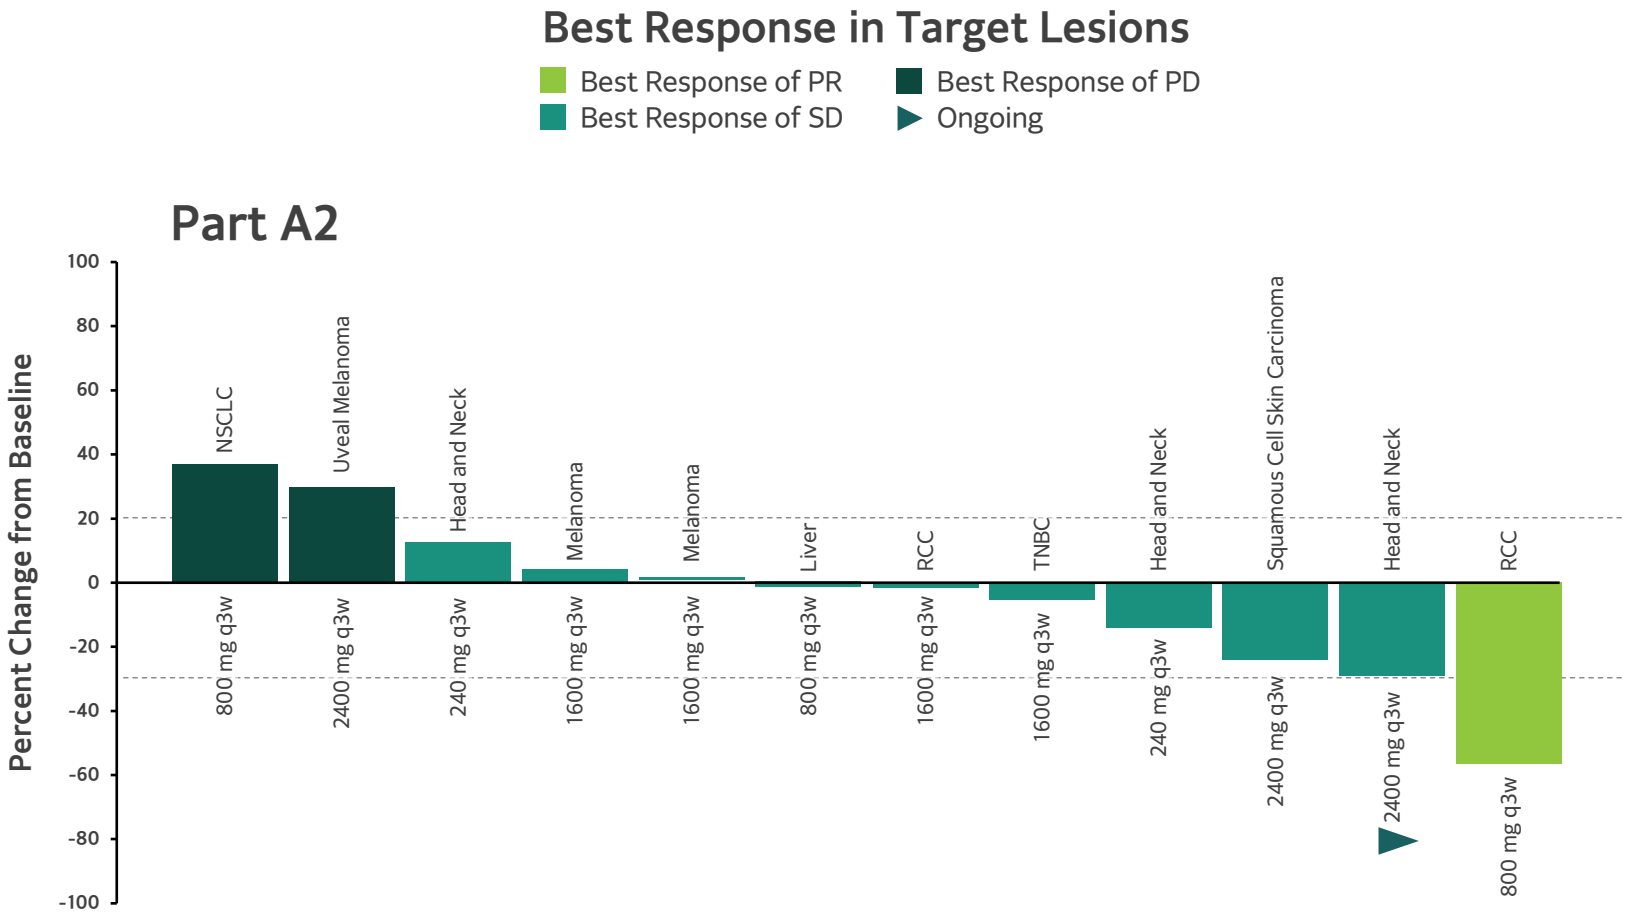
  All 3 patients with ovarian cancer were stable beyond the 16-week cutoff

## **Part A2** (n=15)

- At 800 mg q3w, 1 partial response (PR) was observed in patient with anti-PD-1-resistant clear cell renal cell carcinoma (ccRCC)
- 9 patients had best response of SD
- 6 patients (green highlight) were stable beyond the 16-week cutoff
  - 1 ongoing patient with head and neck cancer had a 29.4% tumor reduction

Yap T et al. SRK-181, a latent TGFβ1 inhibitor: safety, efficacy, and biomarker results from the dose escalation portion of a phase I trial (DRAGON trial) in patients with advanced solid tumors (Poster 780); Presented at SITC; Nov. 10-11, 2022. *Preliminary anti-tumor effects were assessed using RECIST1.1 and reported based upon local investigator reads: as of August 29, 2022. SRK-181 is an investigational drug candidate that is being evaluated for the treatment of cancer. SRK-181 has not been approved by the US FDA or any other health authority, and its safety and efficacy have not been established.

# Preliminary Efficacy Data in Combination with Pembrolizumab: Best Response in Target Lesions



## Part B (as of 8/29/22)

- **14 patients enrolled**
- **One additional confirmed PR**
  ongoing patient with anti-PD-1 resistant clear cell renal cell carcinoma
- **All dose levels were generally well tolerated**
  including recommended SRK-181 dose of 1500 mg q3w or 1000 mg q2w in combination with anti-PD-(L)1 for Part B

Yap T et al. SRK-181, a latent TGFβ1 inhibitor: safety, efficacy, and biomarker results from the dose escalation portion of a phase I trial (DRAGON trial) in patients with advanced solid tumors (Poster 780); Presented at SITC; Nov. 10-11, 2022. *Clinical cutoff date: August 29, 2022.
Response is assessed using RECIST v1.1 by PI; the scan is performed during screening, 6 weeks after first dose, every 9 weeks for the next 6 months of treatment, and every 12 weeks thereafter. SRK-181 is an investigational drug candidate that is being evaluated for the treatment of cancer. SRK-181 has not been approved by the US FDA or any other health authority, and its safety and efficacy have not been established.

# SRK-181: Encouraging Early Clinical Data Consistent with Hypothesis

## Preclinical Data

**TGFβ pathway evaluation (PD)**
- ✓ Target engagement (blood)
- ✓ TGFβ-1 signaling (tumor p-SMAD2 & RNAseq)

**Immunophenotyping, including immune exclusion status**
- ✓ Tumor immune contexture (e.g., tumor CD8+ T cells)
- ✓ Immune cell contexture (tumor & blood MDSCs)
- ✓ Immune response markers (e.g., IO gene signature)

**Therapeutically relevant dose**
- ✓ Drug exposure needed for efficacy

**Objective response**
- ✓ Anti-tumor response and survival benefits

## Phase 1 DRAGON proof-of-concept trial

**TGFβ pathway evaluation (PD)**
- ✓ Target engagement (blood)
- ⧗ TGFβ-1 signaling (tumor p-SMAD2 & RNAseq)

**Immunophenotyping, including immune exclusion status**
- ⧗ Tumor immune contexture (e.g., tumor CD8+ T cells)
- ⧗ Immune cell contexture (tumor & blood MDSC's)
- ⧗ Immune response markers (e.g., IO gene signature)

**Therapeutically relevant dose**
- ✓ Dosing regimens achieved target steady state levels

**Objective response**
- ✓ Anti-tumor response observed (partial responses)

# SRK-181 Summary

## Differentiation

- First in class monoclonal antibody targeting latent and context-independent binding to TGFβ1
- Differentiated from other TGFβ inhibitors by its novel selectivity
- Offers potential to avoid toxicity and dose-limiting challenges of non-selective TGFβ inhibition approaches

## Strong Scientific Rationale

- Emerging evidence implicates TGFβ1 as driving resistance to checkpoint inhibitor therapies
- Potent and selective inhibitor of latent TGFβ1 activation in preclinical studies
- Strong safety and preclinical efficacy data

## Clear Clinical Pathway

- DRAGON Part A demonstrated ability to escalate to high doses of SRK-181 at levels exceeding the anticipated efficacious drug exposure level
- Advanced to DRAGON Part B: Evaluating SRK-181 in 5 parallel tumor-specific cohorts, with efficient path towards early POC for each
- Early efficacy signals have been observed

## High Unmet Medical Need & Large Commercial Opportunity

- PD-(L)1* becoming a standard of care therapy in many tumor types; the market for synergistic combination product would be vast
- SRK-181 could potentially be used in many tumor types, potentially both in patients resistant to PD-(L)1 and in CPI naïve patients, as well as other therapeutic applications

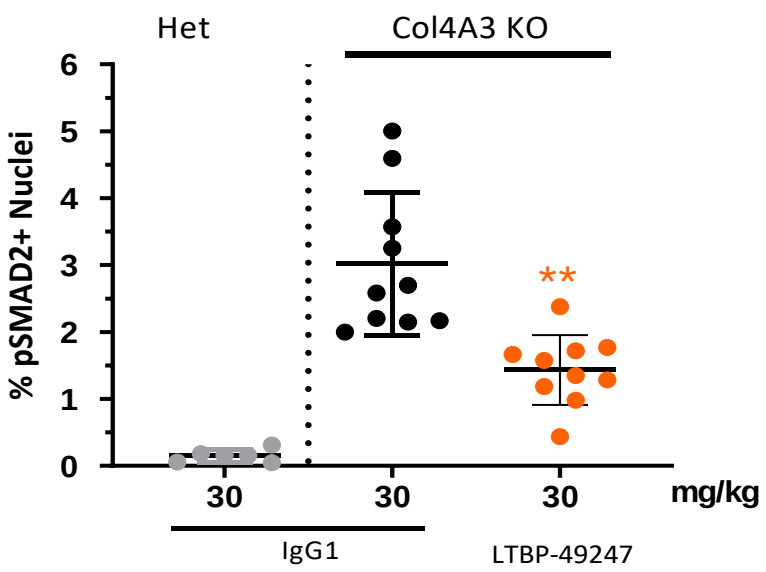
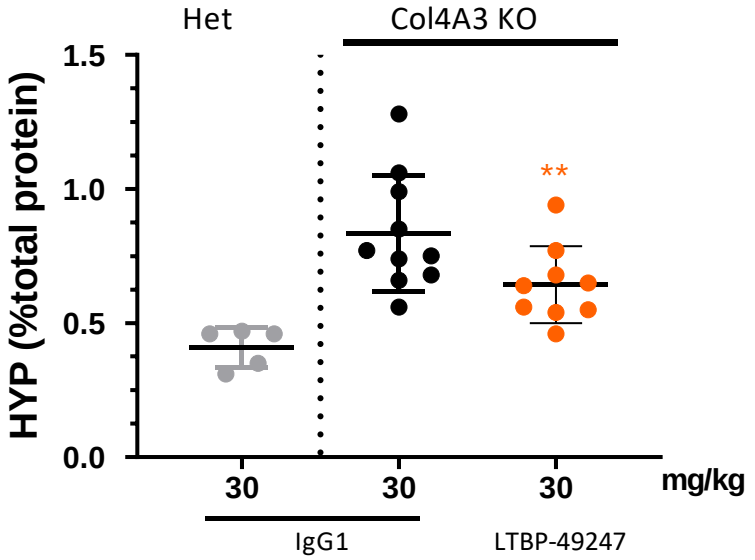
# LTBP-49247 Reduces TGFβ Signaling and Fibrosis in Preclinical Models of Kidney Fibrosis

**LTBP-49247 reduces a TGFβ PD biomarker in kidneys of *Col4a3*KO mice (Alport Syndrome model)**



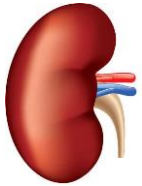
**LTBP-49247 reduces fibrosis in kidneys of Alport model**



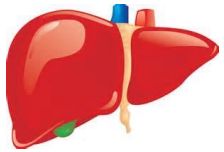
** p < 0.01
One way ANOVA vs. IgG
HYP=hydroxyproline

- Efficacy also seen in rat model of kidney fibrosis
- No observed toxicity in mouse 13-week non-GLP repeat dose study
- Favorable PK in cynomolgus monkeys (t1/2 ~28 days) suggests LTBP-49247 is amenable to clinical subcutaneous dosing with promising developability profile

# Significant Opportunities to Address High Unmet Need Across Multiple Fibrotic Indications

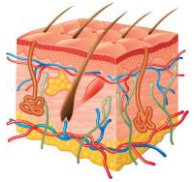


**Alport Syndrome (AS)**
**Focal Segmental Glomerulosclerosis (FSGS)**
**IgA Nephropathy (IgAN)**



**Primary Sclerosing Cholangitis (PSC)**

**Idiopathic Pulmonary Fibrosis (IPF)**



**Diffuse Cutaneous Systemic Sclerosis (dcSSc)**

**Collectively, significant commercial potential given large patient population with clear high unmet need given poor outcomes and lack of effective therapeutics**

- Significant impact to delay or stop progression to end-stage disease and organ transplant
- Expansion opportunities via other indications given shared etiologies

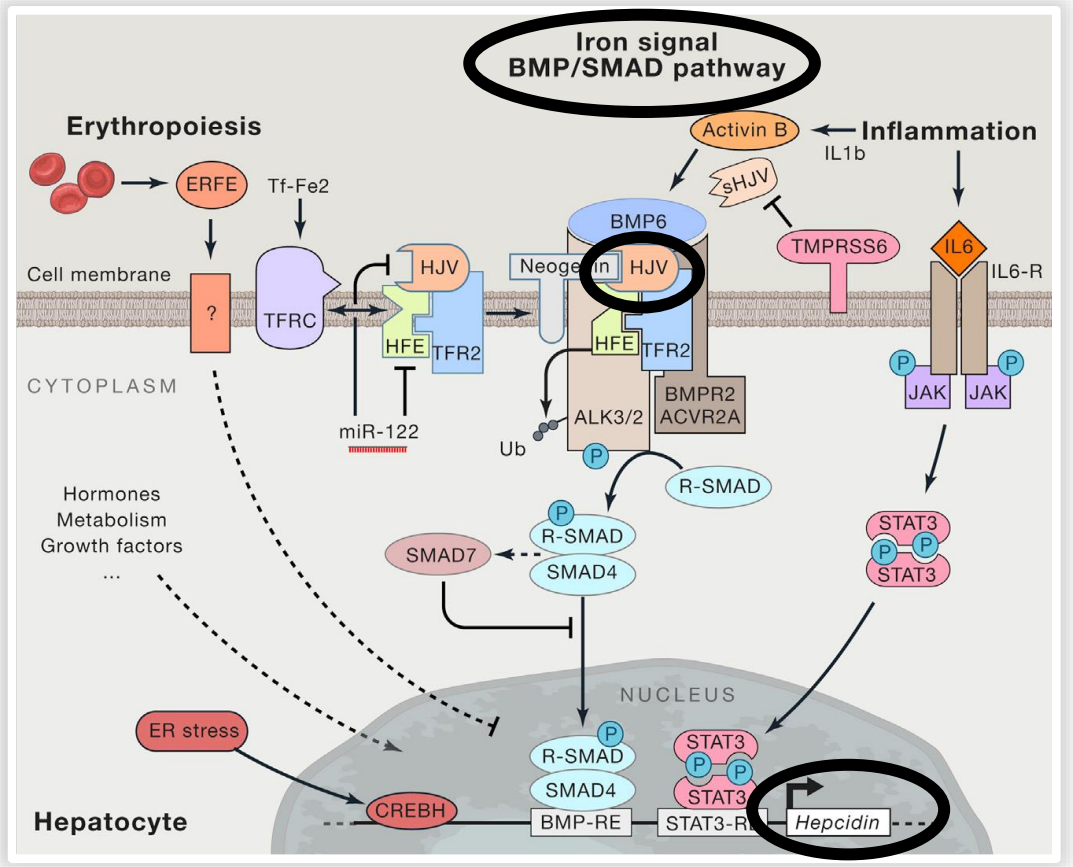
# BMP6/RGMc Pathway is a Well Validated Regulator of Systemic Iron Homeostasis



## HJV/RGMc is a key player in the regulation of hepcidin expression

- Human mutations in HJV/RGMc establish it as a central player in hepcidin regulation[1]
- Knockout phenotypes and tissue-specific expression pattern demonstrate that its predominant role is in iron homeostasis[2]
- Member of repulsive guidance molecule (RGM) family (RGMa, RGMb, RGMc/HJV) that act as BMP co-receptors to modulate BMP signaling[3]

## Anemia of Inflammation/ Chronic Disease

- Elevation of proinflammatory cytokines drives increased hepcidin expression and results in anemia due to functional iron deficiency[4]

| Untreated | Ab treated |
|---|---|
| ↑ Hepcidin | ↓ Hepcidin |
| ↓ Serum iron | ↑ Serum iron |

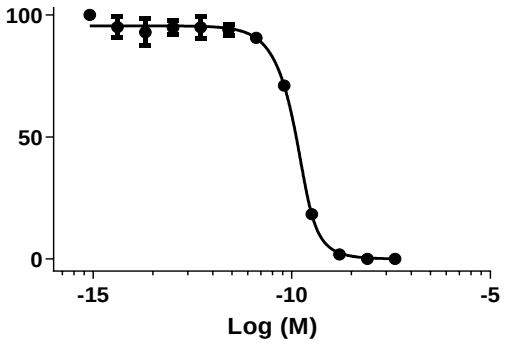
# HJV-35202: A High-Affinity Antibody Demonstrating Selective Inhibition of HJV/RGMc and Robust PK/PD in Cynos

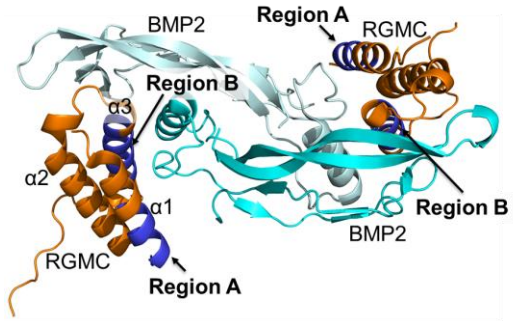
## Key Attributes of HJV-35202:[1,2]

- High-affinity antibody
- Specific to RGMc, with mechanism of specificity understood
- Cross-reactive to human, mouse, rat and cyno
- Sustained PD observed in healthy rats and cynos, with clear PK/PD relationship
- Highly manufacturable framework with no sequence liabilities
- Formulatable into a subcutaneous format (150 mg/mL)

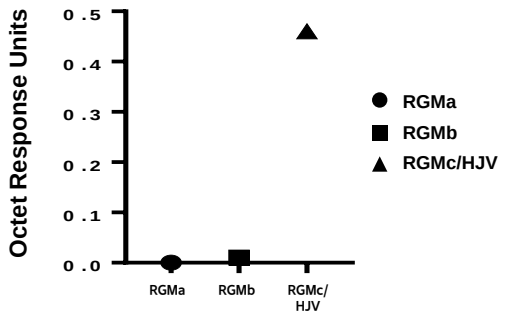
Potent in vitro binding affinity (KD=3.9E-11)



Highly specific to RGMc/HJV with well understood mechanism



Specific to RGMc over other RGM family members



Sustained PD effect in single dose Cyno study

# Significant Opportunities to Target Iron-Restricted Anemias Across Multiple Indications

## Chronic Kidney Disease (CKD)

## Anemia of Chronic Inflammation (AI)

## Myelofibrosis (MF)

**Targeting RGMc/HJV for anemia is well validated and relatively de-risked**

- High levels of hepcidin, the main regulator of systemic iron metabolism, are associated with anemia across various diseases

**Safe and convenient RGMc inhibitor has promise of improving patient outcomes across multiple indications as stand alone or in combination with SoC**

- Significant and clear unmet need given lack of approved treatments or severe limitations of current treatments
- Well defined patient population

**Collectively, sizeable commercial opportunity given relatively large population**

- Potential for rapid POC with clear regulatory path
- Opportunity to build an anemia franchise with initial POC and indication expansion in the future

# Scholar Rock Summary

# Key Investment Highlights

## Revolutionary Platform

**Discover and Develop**
monoclonal antibodies with extraordinary selectivity

**Overcome the Challenges**
targeting the latent forms of growth factors

## Robust Clinical Pipeline

**Apitegromab (Phase 3)**
- Potential first-in-class
- Significant market opportunity
- Program on track
- Clear path to approval

**SRK-181 (Phase 1)**
- Potential to shift current treatment landscape for cancer patients with CPI resistance

**Upcoming Data Readouts**
for both clinical programs

## Positioned For Success

**Discovery-stage Pipeline**
- Fibrosis and iron-restricted anemia
- Strategic optionality

**$205M financing in June 2022**
- Year end cash balance of $315M, anticipated runway into 2025
